BITONYX

WHITE PAPER

Table of Contents
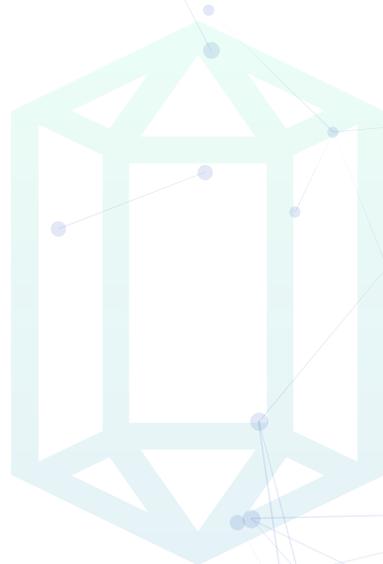

Abstract

Over the last few years, crypto trading has attracted mainstream investors who had never thought about the technology behind it. In the same way, artificial intelligence is stirring people's imaginations – even if they do not understand it fully. What does all this mean to you? How can you put it to work for your investment strategy? In this whitepaper, we will review the ideas that we have used to build BitOnyx AI and present the technology we have created, the technology we plan to create, and the large, encompassing vision that brings everything together. If you believe that crypto trading is worthwhile but that it has remained out of reach for you or if you want to optimize your crypto trading strategy the smart and easy way, read on

Introducing : BitOnyx AI

Crypto trading has transitioned from trend into movement, attracting massive levels of attention. More and more people are recognizing the inherent value in cryptocurrencies, all that they have to offer by reshaping the financial market and everything they can do to safeguard our economies from the pitfalls and shortcomings that have led to crashes in the past. This represents a major shift into the future, one that people have imagined and hoped for since time immemorial. By and large, however, it has remained out of reach for most investors, especially casual investors.

BitOnyx AI is changing all that.

Time and again, people have exhibited an interest in crypto trading and a willingness to adopt it. They have expressed a desire to learn more about it, but where could they start? If you are not an expert in cryptocurrencies currently, where would you even begin to learn these concepts and master them to the point that you could earn an income off them?

The way that we see it, progress in crypto trading will not come about until crypto trading has become more widely accessible. Once we came to this realization, we decided to devise a solution drawing on all of the most cutting-edge technologies available, including artificial intelligence and real-time algorithms. Rather than trying to force users to learn the ins and outs of the technology behind crypto trading, we have taken a different tact, making crypto trading simpler and easier to understand that it has ever been before.

Think about it: this is the same approach that gave rise to personal computing in the first place. It was not the complexity of computers that attracted people but the ease-of-use that graphical interfaces introduced. Once people felt that they could pick up and use computers quickly and through minimal effort, they did so. It took the engineers on the other side reaching out a hand and guiding the users through the computer experience.

Introducing : BitOnyx AI

This is precisely what we are doing. BitOnyx AI is a fully-automated crypto trading system that puts minimal pressure on the users themselves, dramatically cutting through the complexity once thought inherent to these systems. We are using many market-neutral strategies, all tested extensively and proven historically, empowering people to immerse themselves in crypto trading right now.

WHY WAIT?

USING BITONYX AI, ANYONE CAN GET INVOLVED IN CRYPTO TRADING INSTANTLY.

Benefits and Features

Despite the large numbers of people who have taken up crypto trading, significant portions have also avoided doing so, leery of the potential for losses. Anyone who tells you that they have devised a surefire way to generate profit in trading – or in anything for that matter – is trying to sell you something, but using BitOnyx AI, it is possible to turn a profit regardless of the market conditions. This is because of the intelligent framework upon which BitOnyx AI operates, leaving behind some of the most pressing drawbacks of other trading, namely human error.

Working via machine learning and neural network algorithms, BitOnyx AI is not vulnerable to the same human error that every advisor, analyst, and "expert" you meet will be. This is trading free from emotion and free from the perspective mistakes and irrational opinions that lead investors into disasters. Always running, always thinking, and always working, BitOnyx AI removes emotions from the crypto trading equation, drastically simplifying the entire process via rapid adaptation techniques so that you can minimize your risk. In an era when there is crypto trading free of human error, when something like that is possible, anything else is going to pale in comparison. It is impossible to out-compete ultra-powerful mathematical models, which is precisely what we are offering through BitOnyx AI.

We have focused on making crypto trading and crypto tracking more straightforward while also equipping our users with all the raw power of an advanced artificial intelligence system. The system itself, of course, is anything but complicated. Generating a forecast every day, BitOnyx AI automatically buys and sells cryptocurrencies depending on forecasts and the appropriate trading strategies. It accounts for more variables than any human analyst would be able to, and it weighs those variables against each other in the most objective ways possible. By comparing proven indicators and known trends, it takes into consideration more than 700 cryptocurrencies and more than 70 analytical views – the level of efficiency that you would expect from true innovation in the field. The system processes approximately 200 million rates every day, which it collects via the world's most robust cryptocurrency exchanges in real-time. This enables you to detect even the most minute price fluctuations so that you understand the direction in which prices are moving.

The value of BitOnyx AI is most evident, as you may guess, in the results that it already driving. Delivering impressive success ratios, it is performing more consistently than traditional metrics carried over from stock markets and bond markets – metrics that never made a whole lot of sense and that make even less sense in crypto trading. We are positioning our trading platform to push crypto trading as a whole forward, making bold moves toward the future that we want to see for this technology.

Benifits and Features

When you are on BitOnyx AI, you are leveraging all of the power of artificial neural networks and stochastic process theory, both of which contribute to a comprehensive analysis of the facts at hand. You never need to do anything from there: the platform makes the decision and carries out the trade.

If you are familiar with larger institutional traders, then you know this is roughly the strategy that they have adopted as well. There is no one in their offices running one trade after another. Instead, they trust computers to take care of everything. They are minimizing their risk by focusing on the intelligence behind their trading strategies, automating whatever they can automate and thinking up new and intriguing ways to touch the trades less. This is a key principle at BitOnyx AI, devising intelligent algorithms and then letting them run on their own so that there are fewer openings for anything to go off the rails.

Lower risk, higher reward: this is a mantra that we live by as a development team. We have created BitOnyx AI for results, lowering our risk and raising our win percentage gradually and methodically. If something is not delivering results for our clients and ourselves, then we would look back at it and figure out what we needed to do to change it. As it is today, our concepts are working. The last six months have exceeded even our own most ambitious expectations for this platform – and we are proud to pass along the benefits to users like you. What is more, BitOnyx AI features its own system for documentation and auditing, creating an immutable record of your trading history so that you can turn back to it whenever you need it and so that our algorithms can check it against your plans and the market in general to optimize your trading strategy even further. When we are talking about the benefits inherent to BitOnyx AI, we believe that the sky is the limit, smarter trades leading into smarter trades and profits leading into profits.

Current Uses

A trading platform, BitOnyx is available as a premium tool in a variety of packages. We will delve into that more soon, but before we do, we want you to know about all of the products and services that we are offering alongside it. These are also tools that we have engineered to prepare you for success in crypto trading, positioning you to compete with all of the most successful crypto trading professionals and to make your mark in the field. Chief among these is CryptoCoins Forecast, a wholly-owned subsidiary product of BitOnyx AI available as a free app on iOS Android, and BitOnyx Token, a proprietary token available within the BitOnyx environment.

None of this is to say, however, that you need to navigate multiple platforms to get started in crypto trading. All of this is optional, working however you need it to work. You can aggregate all of these functions into a single platform, checking one place for all your trading information and trading functions every day. Once you have subscribed to BitOnyx AI and logged in, you can access the plug-and-play system, which we have designed to optimize our ecosystem even further.

To fully understand how we are using our BitOnyx AI technology, though, you need to understand how the technology functions. 24 hours a day, 7 days a week, BitOnyx is running. We have created a system that offers zero downtime, applying calculated strategies that pump-and-dump signals and market volatility will neither distract nor hinder. For anyone who has ever looked on with envy at the institutional investors and their high-powered trading algorithms, BitOnyx AI is a singular opportunity to do the same. You can generate micro profits that add up to large profits over time, leaving behind any sense that you are "gambling" when you are trading in the crypto market.

Benefits and Features

We have implemented BitOnyx AI for perpetual improvement, simulating the function of the human brain so that there is a rhyme and a reason to the forecasts we are making. This leads to better trades in general, perching above the market forces rather than falling prey to them. When you see how and why other traders are making decisions and why they are encountering the same errors time and again, you can avoid them yourself – something at which BitOnyx AI excels. Then, because of machine learning, it becomes even more astute about picking up the shortcomings and failures that other traders are making.

Trading instantly, trading automatically, and even trading across multiple exchanges within a single window: BitOnyx AI is the ultra-efficient trading platform that other crypto trading enthusiasts have long coveted and lacked. We designed this platform with beginners in mind, emphasizing accessibility and opening the door to crypto trading for a whole new generation of traders. There is something for everyone here, though. We are offering a wide range of plans so that no matter what you have in mind for your crypto trading journey, you will be able to find it with us.

Before we get into that, however, let's take a look at the different tools in the BitOnyx ecosystem.

BIT⬡NYX

CryptoCoins Forecast App

Ideally, you would start with CryptoCoins Forecast (available at https://www.coinsforecast.com/).

This app is the perfect introduction to the BitOnyx AI ecosystem, easing new users into the concepts of crypto trading. Providing 700 pairs of cryptocurrencies, it is growing constantly encompassing more and more of the crypto trading world every single day. On top of that, we store all forecast history and statistics in the CryptoCoins Forecast app, making all of this information available free and downloadable. We are committed to making CryptoCoins Forecast comprehensive, which is why we continue to add new cryptocurrency pairs to it and to tweak the app itself. In our view, it is suitable as an introductory, but it is also powerful enough that even seasoned investors can glean tremendous value from it.

Check out this screenshot from the app:

BitOnyx AI Trading Platform

From there, you may shift onto BitOnyx AI, our automated trading platform. This platform uses integrated forecasting, as described in the first section, to make decisions about crypto trading and then execute trades based on those decisions. If you have ever tried to slog through the guesswork of crypto trading yourself or if you have avoided crypto trading because you did not want to do so, then BitOnyx AI may sound a little like a miracle, its convenience unmatched and its results impressive. Here is a live view of the trading platform.

BitOnyx Token

The other supplemental product that we have created for BitOnyx AI is BitOnyx Token, a utility token that you can use throughout the BitOnyx environment. This is an ERC-20 standard token based on the Ethereum blockchain, and its supply is fixed at 100 million. This supply is unchangeable unless the community insists on and votes for a change. From purchasing services on BitOnyx to paying fees for trades to incentivizing referrals, BitOnyx Token makes all of the manual tasks that you need to do nearly as simple as crypto trading itself is on the platform. Every step of the way, we are simplifying your life by emphasizing ease-of-use, whether that means optimizing your results or reducing the complications associated with crypto trading.

BitOnyx Token is particularly attractive when you view it in terms of our affiliate program, which entails zero risk. Investing nothing, you can earn a passive income just by referring other users to BitOnyx AI, converting your BitOnyx Token into other cryptocurrencies. The main takeaway is that BitOnyx Token is flexible, just as BitOnyx AI itself is. We are a serviceoriented firm, our sights set on improving experiences in crypto trading and helping people achieve all of their most exciting goals within the field. We want our tools to support people as they work to bring their dreams to life.

BITONYX

Subscription Packages

Check out these options. The odds are that you will find one that fits for you, and if you are on the fence, stick with the most affordable option for now and then see which one makes the most sense for you once you have started to witness the results for yourself.

Remember: this is the toughest decision you are ever going to make on BitOnyx AI. How relieving is that? Once you have subscribed and made the leap, choosing to stand up for your future and your financial stability, BitOnyx AI is there for you, guiding you and protecting you, pointing you toward the raw intelligence that so many other traders are missing out on.

Planned Uses

Planned Uses Every day, we are examining additional exchanges to determine ways that we can expand BitOnyx AI even further. Our goal is to keep our vision growing, thinking up new and intriguing ways to serve as pioneers in crypto trading. As soon as we have proven our concepts as driven certain levels of results, we are onto the next challenge. That is the type of team that we are, looking for new ideas that we can adopt and integrate to continue to build the BitOnyx AI ecosystem. It is never enough for us. We want to change the world through BitOnyx AI, and we want you to be there right alongside us.

There are new exchanges rising constantly. Every week, developers are launching their exchanges, most of which fail to gain the traction they need to make an impact on crypto trading. As professionals in this field, we stay apprised of all of them, but we are making decisions about which ones to include carefully. We do not want to overlook any exchanges that would fit our philosophy and our mode, but we also do not want to integrate anything that falls short of our rigorous standards. That said, we only consider exchanges that feature an open API and volume. Once we see that, we look at multiple other variables to see if the fit is right.

On top of adding exchanges to BitOnyx AI, we also plan to start constructing custom trading strategies. This is a service that many of our users have asked us about, reaching out to us because they know of our expertise in crypto trading and they want to leverage as much of that expertise as possible. We are enthusiastic about this concept because we see that there is undeniable potential to allowing our users to test their own trading strategies using the analytical power of the nodes in the BitOnyx AI system. If someone is confident about their trading strategies and they believe that it will mesh well with our artificial intelligence and machine learning technologies, then we are open to seeing how it works out. This is one of our main focuses right now, and we have pushed it into active beta testing, scheduling a launch for a 2020 date to be determined.

Another use that we have planned for BitOnyx AI is in support of government agencies. Working to serve the masses, these agencies encounter huge data sets that are comparable to the data sets we are processing to make decisions about crypto trading in BitOnyx AI. They are somewhat skilled in wielding these data sets, but they know that they could be doing better. This is where BitOnyx AI can make a difference, offering analytical solutions that empower government agencies to take their work to a whole new level. As we will discuss more in the next section, we foresee uses for BitOnyx AI in healthcare and other public sectors, our powerful algorithms removing human error from high-stakes decisionmaking processes where people's lives and livelihoods are at stake.

BIT⬡NYX

Planned Uses

A longer-term use that we have planned for BitOnyx AI is in investment advisory services. Similar to the investment advisory services that we are offering in crypto trading, these services would analyze users' investment portfolios and assets and then offer them directions for optimizing their strategies. This use will necessarily build beyond the number of variables that we have integrated into our crypto trading platform, which is why it will take a much longer period of time for us to develop. Still, we have taken preliminary steps to putting this use for BitOnyx AI online, and we will continue to make announcements within the BitOnyx AI community regarding our progress.

In the near future, we will continue to enhance our crypto trading platform, taking into account what our users are telling us they want to see out of it. This is, first and foremost, a tool meant to make people's lives better. If people tell us they need us to build something for BitOnyx AI to make it run more smoothly or to make it more intuitive for them, then we take that seriously. Service – and this bears repeating – is a motivating principle for us. Every day, we are listening to our users so that we understand their needs. BitOnyx AI is a revolutionary tool on its own, but it is the users who imbue it with meaning.

The uses for our artificial intelligence and machine learning technologies are, in all honesty, without limit. We can apply these ideas anywhere that we go in the world. When we see decision making that seems flawed, we can fix it – by removing human mistakes from it. There is no reason, when computers have progressed to the point that they have, for us to accept the outmoded, outdated, traditional ways of doing things. There are better strategies out there. Systems like BitOnyx AI are painting a brighter future for all of us to enjoy.

Charting the Future

When you walk through a doorway and there is a splinter sticking up out of the floor, how do you react? If it hits you in the foot and causes you pain, then you remember it. You learn from it. Either you remove the splinter from the floor or you step over it the next time you walk through that doorway. Whatever you choose, you do something that accounts for the fact that the splinter is there. This seems astoundingly simple when we say it out loud, but it is the basis for all intelligence – and the basis for artificial intelligence too.

Talking about artificial intelligence, we are talking about nothing more than learning. We introduce variables into a system, tell the system what our goals are and what our vision of success is, and then let go, hoping to see some results. Some teams have experienced minor success, and others have experienced more significant successes. At BitOnyx AI, we cannot eliminate risk from crypto trading, but we can tell you this: we are seeing success using our algorithms and models. The artificial intelligence and machine learning technology that we have created is impressive in its reliability, and learning from previous forecasts, it seems adept at responding to current market circumstances, which then work out for everyone who is using it to analyze and execute trades.

As we chart out the future, we are looking to more and new exciting ways to optimize crypto trading. We are automating everything that we know we can automate so that cryptocurrencies become more lucrative to those who have steered clear of them so far – and much more lucrative to those who have dabbled in trading over the last few years. The future of crypto trading, as far as we are concerned, has not even begun yet. We believe that people, in their thousands and their millions, will take to crypto trading on an ever-larger scale thanks to ideas like this one, ideas that take some of the intimidation out of the market.

On its own, crypto trading is a thrilling prospect. You can create your own crypto trading strategy to achieve financial success that you probably thought would have remained out of reach for you. Then, you can integrate your crypto trading strategy into a complete financial strategy and break through all of the obstacles and barriers you had perceived in your future. Why accept anything less than that? When you know the income that you want to generate and the time and energy that you want to put into generating it, we say accept nothing less. If your dreams are big, then we are right there with you, tailoring BitOnyx AI to your most expansive thoughts.

Living through recessions and other downturns, we cannot help but think something more is possible. We have seen how fragile the world economy is, and we refuse to allow ourselves to fall into its machinations. Through crypto trading, you too can future-proof yourself against downturns and drops. You can chart your future while we chart ours. Together, we can catapult ourselves to the heights of success. None of this is going to happen overnight, but it can happen.

Charting the Future

The potential for BitOnyx AI is not isolated to the financial markets, either. This is merely the most obvious application for our technology, and already in talks with government agencies, we have gone through some applications that could impact people in a more immediate way, saving lives and fostering a more wondrous society for us all.

Take healthcare, for example. Every day doctors, insurance providers, and medical professionals need to make decisions about people's healthcare. They need to make predictions about survival rates or diagnose illnesses based on large data sets and tenuous evidence. We see mistakes in this field just as we do every other field, but there is a key difference: when people make mistakes in healthcare, it leads to pain, suffering, and death. Applying the artificial intelligence and machine learning technologies that underpin BitOnyx AI to healthcare, we can reduce these negative outcomes dramatically. We can make healthcare better by making it smarter.

Nearly as urgent and no less intriguing, we are also looking at ways to apply the BitOnyx AI concepts to electricity and water usage. Because climate change remains one of the most pressing challenges of our day and because people and governments continue to look at initiatives conducive to a healthier environment, artificial and machine learning could empower decision-makers to save not only money but natural resources, protecting and stewarding our planet for the next generation.

The same concepts that apply to healthcare, electricity, and water apply to air traffic, public transport, and road traffic, all areas in which decision making affects people's lives, either costing them or safeguarding them depending on which way the decisions go. There is no room for error in these areas because when error comes into play, we are all worse off. Traffic accidents and plane crashes can go the way of the dinosaurs, becoming remnants of an age past. It starts with us – with the decision to cede our decision making to a system that can guide us more wisely and shrewdly.

We have every reason in the world to trust the data analysis prowess of our best computers. This is the basic premise for BitOnyx AI, and if you agree with it, then we are ready to get to work together.

Leading the Way Forward

What does financial independence mean to you? What does your vision for the future look like? As a team, we are always asking ourselves big questions like these. We have dedicated ourselves to crypto trading, but our vision is one for the entire world. As much time and energy as we have spent on transforming BitOnyx AI into the high-caliber trading platform that it is, we are always dreaming up new uses for this technology. We are not going to slow down for anything, just as we would never tell BitOnyx AI to slow down. 24 hours a day, 7 days a week, we are at work, our trading platform poised to upend crypto trading in general and breed the next generation of smart investors.

Because of everything that crypto trading has done for us, we feel obligated to pass it along. We want to share it with others. For every person who has watched the crypto market boom and wondered why they were not getting in on it, who has struggled to make sense of all the information about cryptocurrencies, we are paving a cleaner path. You should not need to be able to code your own cryptocurrency just to trade in the crypto market, any more than you should need to be able to brew up your own soda to own stock in Coca-Cola.

Simpler is better, and simpler is possible. The immediate benefits of BitOnyx AI to casual and fresh investors are obvious. You can start your crypto trading journey today. All you do is subscribe, select the plan that fits your needs best, log into your account, and let our platform walk you through the rest. Every piece of confusion, all of those convoluted ideas and overly-long terms, you can forget about them. Shift your attention to bigger-picture concepts, like what you would do if you had achieved the levels of passive income you want for yourself.

While it is worth reiterating that we cannot eliminate risk in crypto trading, we can minimize it. We are offering a straightforward, low-risk crypto trading opportunity, something that you will not find elsewhere. The advisors who are applying old-style concepts to new-style markets are never going to deliver the results that you want for yourself. If you want to thrive in our modern world, then you need to play the rules of its modern games. Perplexing as those rules may be for anyone, we are here to help you, supporting you and standing by your side while you navigate these markets.

In addition to reaping the financial benefits of our crypto trading platform, however, you are also taking on an important role in the BitOnyx AI movement. This is, as you have seen, a technology that is making the world a better place. We are revealing the future through the work that we are doing – no easy task, to be sure, but one that we are proud to undertake. Every time that we see human error inflicting pain on people, we know that our efforts are worthwhile. All the industries and sectors that would be better off if only leaders were making better decisions, we are stepping in to introduce artificial intelligence and machine learning technologies that could make all the difference.

Leading the Way Forward

As we take a bird's-eye view of the world, seeing the conclusions that our artificial intelligence is drawing about it, we feel humbled. There is so much that we do not know, but there is so much that we can do – by admitting what we do not know. No investor can know everything, no leader can know everything, and no one needs to know everything. It is the computers' job to look at the data that we feed them and then spit out the results of their analyses. Intuitively, we know that this makes sense, and it is the 21st century unfolding in front of us.

BitOnyx AI is poised to champion this unfolding century. We understand our mission, and we respect it. As users of our crypto trading platform, you can count on us to do right by these ideas and to follow through on the statements we have made. This is complex technology – make no mistake about that – but we will carve it down into its most basic components for you, saving you time, saving you brainpower.

Going forward, our team will continue to think and act as leaders in all of these spheres: crypto trading, artificial intelligence, machine learning. We will represent the crypto community proudly, and we will promote smarter decision making to leaders across every sector. While there are many projects that seem similar to ours on their surface, they are often exit scams – or lack the transparency that we have made a centerpiece of our project. We store all of our tenders in two places, both on the exchange and on our website, preventing any mishandling or misrepresentation. Anyone can compare our history with our claims for a real-time view of the results we are driving.

Now, we would like to invite you to become a part of this movement. BitOnyx AI is not about us: this is about you. As a user, you are at the center of our technology. We want you to feel like these tools are working on your behalf. If you have any questions or comments about BitOnyx AI or any of our other tools and ideas, we make ourselves available all the time, just like our crypto trading platform.

To get started and subscribe to BitOnyx AI, check us out at www.BitOnyx.io now!
